

E-QR©, has been specifically designed to provide critical authenticated information during an emergency situation. The **E-QR©** provides personal contact information, medical condition and COVID19 test results to facilitate travel even if you are not fluent in the native language or require special attention. This technology helps to facilitate the resolution of the emergency situation and provide the destination health service with the minimum information necessary to effectively address the emergency. In addition, a mechanism is provided to incorporate the non-resident visitor into the management of the pandemic at the secure destination.

SHARE & TECHNOLOGIES

Emergency Quick Response Pilot

The tourist receives information about E-QR service available in the Balearic Islands

The tourist decides which information include to obtain the EQR image

Travelling agencies or health personal can generate the EQR prior to departure

E-QR image can be downloaded or sent by email to the tourist

The tourist shows the E-QR image during his stay in Balearic Islands

How is it used?

- 1 At Balearic Islands, the E-QR protected tourist shows the EQR image to validate information related to COVID19
- 2 The E-QR protected tourist can display the EQR image to facilitate the contact tracing if necessary
- 3 The emergency agent can obtain the encrypted information from E-QR just taking a photo without data connectivity
- 4 The emergency situation is solved with as much information as possible to take the best decisions
